

In The Claims:
Cancel Claims 1-6, inclusive.

Add the following Claims:

7. (new) A mobile cutting apparatus comprising a mobile vehicle having pivotally mounted forward elongated boom at its forward end;

a remote controlled power chain saw mounted at the forward outer end of the boom, hydraulic piston and cylinder means to raise and lower the boom about its pivotal mounting to the vehicle, said boom having telescoping means to telescope forward along its length to extend the chain saw forward relative to the mobile vehicle, said saw being rotatably mounted to the outer end of the boom to rotate coaxially of the length of the boom, hydraulic power means to power said coaxial rotation of the saw;

said saw being elongated in a forward direction and being pivotally mounted at its rearward end to the forward end of the boom to raise and lower the forward end of the saw about said pivot for operating the saw, said saw comprising an endless chain with cutting teeth on the chain, whereby the saw may be manipulated to different positions by varying the position and length of the boom and by rotating the saw coaxially and raised and lowered about its rearward pivot to place the saw in different positions for cutting various objects.

8. (new) A mobile cutting apparatus comprising a mobile vehicle having pivotally mounted forward elongated boom at its forward end;

a remote controlled power chain saw mounted at the forward outer end of the boom, hydraulic piston and cylinder means to raise and lower the boom about its pivotal mounting to the vehicle, said boom having hydraulically actuated telescoping means to telescope forward along its length to extend the chain saw forward relative to the mobile vehicle to thereby telescope said saw at the forward end of the boom in a forward direction, said saw being rotatably mounted to the outer end of the boom to rotate coaxially of the length of the boom, hydraulic power means to power said coaxial rotation of the saw;

housing means enclosing said saw about its sides and top, said saw being forward elongated and pivotally mounted at its rearward end to pivot the forward end of the saw upward and downward, hydraulic means power the pivoting of the forward end of the saw, said saw being pivotal downward to lower the saw below the housing for operating the saw, said saw comprising an endless chain with

cutting teeth on the chain, whereby the saw when lowered from the housing and thereafter manipulated manipulated to different positions by varying the position and length of the boom and by rotating the saw coaxially about the length of the boom to place the saw in different positions for cutting various objects remote control means on said motorized vehicle remotely connected to said hydraulic means to pivot and telescope the boom, coaxially rotate the saw, and lower the saw and activate the rotation of the chain saw chain.

9. (new) A mobile cutting apparatus comprising a mobile vehicle having pivotally mounted forward elongated boom at its forward end;

a remote controlled power chain saw mounted at the forward outer end of the boom, hydraulic piston and cylinder means to raise and lower the boom about its pivotal mounting to the vehicle, said boom being extendable in a forward direction to thereby extend the chain saw forward relative to the mobile vehicle, hydraulic means to power said boom extension, said saw being rotatably mounted to the outer end of the boom to rotate coaxially about the length of the boom, hydraulic power means to power said coaxial rotation of the saw;

housing means enclosing said saw about its sides and top, hydraulic means to pivotally lower the saw below the housing for operating the saw, said saw comprising an endless chain with cutting teeth on the chain, whereby the saw when lowered from the housing may be manipulated to different positions by varying the position and length of the boom and by rotating the saw laterally about the boom to place the saw in different positions for cutting various objects

remote control means on said motorized vehicle remotely connected to said hydraulic means to pivot and extend the boom, coaxially rotate the saw, and lower the saw and activate the rotation of the chain saw chain.
